

ABSTRACT

A method, printer, system, and program product for mobile printing, comprising, in one embodiment, the steps of: obtaining a portable computing device with a reference to a printer-independent On-the-Go-print queue on the Internet; obtaining print data; and transferring the print data to the On-the-Go Print Queue on the Internet. In a further aspect of the present invention, the On-the-Go Print Queue may be accessed to set at least one storage or print parameter. In a further aspect of the present invention, the print data may be converted to generic print data and encrypted prior to transferring the print data to the On-the-Go Print Queue. In a yet further aspect, a key for decryption and the reference for the On-the-Go print queue may be obtained at a printer from a portable computing device such as a smart card.
